

Epics, User Stories & Acceptance Criteria

MVP Launch — Platform & HR Bundle (Payroll)

Integrated with updates from meeting: 14 April 2026

Items marked [NEW] were introduced following the 14 April 2026 product meeting.

EPIC-P0-01 — Unified Employer / Company Onboarding & Identity

Bundles: Platform · HR Bundle

Creation of the company/employer account.

US-P0-01-01 — Self-Register the Company on the Platform

As a	A company representative (any employee authorised to sign up on behalf of the organisation)
I want	Register my company on the platform without needing a prior account or an invitation from the platform team, or contact the team to sign up my company as a preference
So that	We can get started immediately and I become the founding Super Admin with full control over the company workspace
AC	Acceptance Criteria
AC-01	A public-facing registration page is accessible without login and requires: company name, primary business email, phone number and a password.
AC-01-B	I can contact sales from a click on the registration page if I prefer that. I can fill a form with an email and a phone number and request that I am contacted.
AC-02	On submission, the system sends a verification code or link to the provided email address and/or phone number. Registration is not activated until the email link is clicked or the code is verified.
AC-03	After verification, the registrant is automatically assigned the Super Admin role for the newly created company workspace.
AC-04	The company account is created with an Onboarding Checklist.
AC-04-B	The company account profile will include Company TIN, SSNIT Number, Tax preferences and other pre-set deductions (Tier 1, Tier 2 & Tier 3). The company must indicate their Tier 2 partners and their Tier 3 partners where applicable.
AC-05	The registration and email verification events are written to the shared audit log with timestamp.
<i>UI NOTE: The "Add Employee" button must not appear on the company profile dashboard during or immediately after onboarding, to avoid distracting the Super Admin from completing setup steps. [NEW]</i>	

US-P0-01-03 — Employee Onboarding

As a	Super Admin
I want	Invite employees to the platform
So that	They can fill their details and/or access the platform and request changes to their personal details
AC	Acceptance Criteria
AC-01	The employer can send an onboarding invitation to employees via email or WhatsApp. Employee details may be completed before or after sending the invite. The employer can choose to allow the employees to fill in their own details.
AC-01-B	For Super Admins signed up for Payroll, the following details must be completed before or after sending the invite:• Gross Salary• TIN / Ghana Card Number and SSNIT

	Number• Tier 1, Tier 2 and/or Tier 3 Deductions• Bonuses and Allowances• P.A.Y.E. Deductions• Employee Bank Account Details (including bank branch)• Employee Unique Company ID [NEW]
AC-01-C	The employer can bulk-onboard employees by uploading a CSV or Excel file, or add employees one at a time. Additional optional details include employment type, date of birth, and start date. [NEW]
AC-01-D	When uploading a CSV or Excel file for bulk onboarding, the system displays a preview of the first five rows, showing at minimum: name, title, employment type, and salary. The user must confirm the preview before submission. [NEW]
AC-01-E	Error handling for CSV/Excel uploads must identify the specific row numbers and field names containing invalid or missing data, and display these to the user before the upload is accepted. [NEW]
AC-02	The Super Admin can view and manage all employees within the Employee Management section.
AC-02-B	The Super Admin or the platform assigns a unique Employee ID to each employee.
AC-02-C	The employee table displays employee name as the primary identifier. Actions (view, edit, delete) are accessible via a three-dot menu on each row. The email field is displayed on the employee detail page, not in the table view. [NEW]
AC-03	Employees can view (read-only) the details entered by the employer and may submit a change request for any details they wish to update.
<i>Outstanding: A profile picture field will not be included in the employee profile. [NEW]</i>	

US-P0-01-04 — Complete Company KYC and Submit to Affinity

As a	Super Admin
I want	Complete my company KYC profile so that an Affinity business account is created and designated for payroll disbursement
So that	I can pay my employees their salaries
⚠ <i>Affinity business onboarding is asynchronous. After submission the workspace enters 'Pending Bank Approval' state. Payroll payment is locked until the webhook account.created is received. KYC is decoupled from onboarding. Super Admins may prepare payroll runs without completing KYC. KYC completion is required only when processing actual salary payments.</i>	
AC	Acceptance Criteria
AC-01	The KYC form collects all Affinity-required fields: • legal name, • registration number, • registration date, • business type (SOLE_PROPRIETOR / PARTNERSHIP / NON_PROFIT / LIMITED_LIABILITY / GOVERNMENT_ORGANISATION), • registration type, • ownership type (PRIVATE / PUBLIC), • isLicenseRequired flag, • Ghana GPS address, • city, • street name, • TIN, • industry/sector (from Affinity sectors list),

	• annual turnover, • source of funds (BUSINESS_PROCEEDS / REMITTANCES), • phone number, • payroll frequency (MONTHLY / QUARTERLY / YEARLY). [NEW]
<i>Outstanding: Industry/sector field will be a text input field. LinkedIn categories have been flagged as insufficiently descriptive for this context. [NEW]</i>	
AC-02	Document uploads are accepted in the following formats: • certificate of incorporation, • certificate of registration, • annual renewal receipt, • business regulation file (PDF / JPG / PNG, max 10 MB each). Files are uploaded to Affinity via the utilities/file-upload endpoint before KYC submission.
AC-03	Director/stakeholder details are collected for each individual holding 10% or more ownership: • title, • first name, • last name, • address (Ghana GPS), • phone number, • position, • shareholder type, • isDirector, • isShareholder, • isSignatory flags, • Ghana Card (ID type, number, issue/expiry dates, front and back file keys), and a live selfie (photoKey per Affinity selfie requirements).
AC-04	On submission, the system calls POST /business-accounts/details, then PATCH /business-accounts/{reference}/directors, then PATCH /business-accounts/{reference}/complete-onboard. The Affinity reference is stored against the employer record.
AC-05	The company profile transitions to 'Pending Bank Approval'. A status banner is shown to the Super Admin explaining that the account is under compliance review.
AC-05-B	The Super Admin dashboard displays an empty state (with explanatory messaging) while KYC verification is pending and no Affinity account has been activated. [NEW]
AC-06	On receipt of the Affinity webhook account.created, the employer Affinity account number is stored and the workspace is eligible to proceed to payment processing.
AC-07	On receipt of account.failed, the Super Admin is notified with the error reason and prompted to correct and resubmit.
AC-08	The Super Admin can save KYC progress and return to complete it in a later session; partial data is preserved between sessions.
AC-09	All KYC submissions and Affinity API responses are written to the shared audit log.

US-P0-01-05 — View Unified Employee Profile

As a	Super Admin
I want	View every employee record in a single, unified profile

So that	I have a complete overview of each employee
AC	Acceptance Criteria
AC-01	The employee detail page displays data in clearly labelled sections. The Super Admin can edit these details directly from the profile.
AC-02	Employees have a profile view (read-only) where they can see their own details and submit a change request to the Super Admin for any information they wish to update.
AC-03	All changes made to an employee record are logged in the audit trail and visible within Employee Management as a change history.
AC-04	The employee profile includes a full activity timeline showing payroll-related events (e.g. salary payments), ordered chronologically.

US-P0-01-06 — Invite and Designate Role Holders via Email

As a	Founding Super Admin
I want	Invite team members by email and assign each of them a role
So that	The right people have access to the correct features within the multi-tenant system
AC	Acceptance Criteria
AC-01	The Super Admin can invite multiple team members in a single step or separately, assigning each a different role with its associated permissions. Role-based permissions are system-preset and assigned at the point of invitation; companies do not define custom permission sets. [NEW]
AC-01-B	The Finance role grants the ability to review payroll compliance and confirm payment processing. This role does not have access to employee profile editing or company configuration settings. [NEW]
AC-02	Invitation links expire after 72 hours. The Super Admin can resend an expired invitation from Role Management within Settings.
AC-03	Each invitation dispatch and acceptance event is written to the shared audit log.
AC-04	Pending (sent but unaccepted) and expired invitations are visible in Role Management within Settings, each showing a status of: Sent, Accepted, or Expired.

US-P0-01-07 — Complete Onboarding Checklist

As a	Founding Super Admin
I want	See a clear onboarding checklist showing all required setup steps
So that	The company workspace is fully configured before any Payroll operations begin
AC	Acceptance Criteria
AC-01	Each checklist step displays a status indicator: Not Started, In Progress, or Complete.
AC-02	KYC completion is not a prerequisite for payroll preparation steps. Payroll preparation (employee setup, salary configuration, payroll run creation) may proceed before KYC is submitted. KYC is required as a gate only before actual payment processing is initiated. [NEW]

AC-03

The checklist remains accessible from the main navigation until all steps are complete.

EPIC-P1-01 — Account Funding & Wallet Configuration

Bundles: HR Bundle

Funding the company account after compliance review and Affinity account activation. Configuring the Payroll wallet.

US-P1-01-01 — Fund Company Account

As a	Super Admin
I want	Fund my Affinity Account
So that	I can configure it into a Payroll wallet
AC	Acceptance Criteria
AC-01	The account is funded by bank transfer using the Company Affinity Bank Account number. The account details are displayed in the Wallet section.
AC-02	The current balance of the account is displayed in the Wallet section and updated in real time upon receipt of funds.
AC-03	The Super Admin can configure the account into a Payroll wallet. The action button for moving funds into the Payroll wallet must use clear, unambiguous language (e.g. "Move balance to Payroll wallet") rather than generic transfer terminology. [NEW]
AC-04	The Super Admin can set a low-balance threshold alert for the Payroll wallet and/or the main account. This threshold configuration is accessible from the account/wallet Settings area, not from the wallet configuration screen itself. An alert notification is triggered when a balance falls at or below the configured threshold. [NEW]

EPIC-P2-01 — Payroll Preparation & Payment Process

Bundles: HR Bundle

End-to-end payroll run: preparation, payment confirmation, and employee payslip generation. Integrated with the shared audit trail and notification system.

US-P2-01-01 — Prepare and Process Payroll

As a	Super Admin / HR / Finance
I want	Prepare and process a payroll run for a given pay period
So that	Salary payments are processed accurately and on schedule
AC	Acceptance Criteria
AC-01	A payroll run is initiated by selecting a pay period (month/year) and an employee group (all employees and/or by employment type). [NEW]
AC-02	The system auto-populates each employee's: name, employee ID, gross salary, deductions (P.A.Y.E. tax, SSNIT Tier 1, Tier 2 and/or Tier 3), bonuses and allowances, and bank account details — pulled from their employee profile and the company's profile.
AC-02-B	Calculation order (applied in the following sequence): 1. Tier 1 and Tier 2 deductions are applied to the gross salary first. Tier configurations are set per company preference. 2. Tier 3 deductions are applied where applicable. 3. P.A.Y.E. tax is then applied to the post-deduction figure. P.A.Y.E. tax percentages are pre-configured in the backend and applied automatically. 4. Bonuses and allowances are added to the post-tax figure as additions, not deductions. [NEW]
AC-02-C	Contract employees may be exempt from P.A.Y.E. tax and/or Tier 1/Tier 2 contributions depending on their agreement. Where an employee's employment type is set to "Contract", the system omits those deductions by default. The Super Admin can manually override this per employee before confirming a payroll run. [NEW]
AC-03	Individual line items can be reviewed and manually adjusted before submission. Any manual adjustments are flagged as priority review items in the audit trail.
AC-04	Once payroll preparation is complete, the user can export it as a CSV or PDF and/or proceed to payment processing.
AC-05	Payment processing requires KYC to be complete and an active Affinity account. The user confirms payment by ticking a confirmation checkbox and clicking the payment action button.
AC-06	Payment progress for each employee is tracked with one of the following statuses: Pending, Next Payroll Run, Paid, or Failed. [NEW]

US-P2-01-02 — View and Download Payslip (Employee)

As a	Employee
I want	View and download my payslip for each pay period via the employee self-service portal
So that	I have clear visibility of my earnings, deductions, and net pay without needing to contact HR
AC	Acceptance Criteria
AC-01	The payslip is available in the employee portal within 1 hour of payroll payment confirmation.
AC-02	The payslip displays: employee name, employee ID, pay period, gross pay, itemised deductions (P.A.Y.E. tax, SSNIT Tiers, other), bonuses and allowances (shown as additions), bank account details, and payment date. [NEW]
AC-03	The employee can download their payslip as a PDF.
AC-04	The employee can access payslips from all previous months via a payslip history view.
AC-05	A notification is sent to the employee when a new payslip becomes available.

7EPIC-P3-01 — Dashboard

Bundles: HR Bundle

The Super Admin dashboard and the employee dashboard. Provides a concise analytics overview. For employees, the dashboard surfaces key payslip information.

US-P3-01-01 — Super Admin Dashboard

As a	Super Admin
I want	See insights into my payroll spend at a glance
So that	I can make informed decisions and act on next steps efficiently
AC	Acceptance Criteria
AC-01	The dashboard displays a summary of the most recent payroll run: total amount disbursed, number of employees paid, number of employees with payments pending, number of failed payments, and the pay period. Statistics reflect the most recent run only, not period-to-date totals. [NEW]
AC-02	When KYC verification is pending and no Affinity account is active, the dashboard activity area displays an empty state with explanatory messaging directing the Super Admin to complete KYC before payment processing is available. [NEW]
AC-03	The dashboard displays the current balance of the Payroll wallet.
AC-04	Low-balance alerts are surfaced prominently on the dashboard when any wallet or the main account falls at or below its configured threshold.
AC-05	The dashboard shows a summary of pending actions (e.g. incomplete onboarding steps, failed payment retries) with direct links to resolve each item.
AC-06	The current activity section of the dashboard displays only transaction records. Non-transaction activity is not surfaced here. [NEW]

US-P3-01-02 — Employee Dashboard

As a	Employee
I want	See a personalised overview of my payroll
So that	I can stay informed about my earnings
AC	Acceptance Criteria
AC-01	The employee dashboard displays the most recent payslip summary: gross pay, net pay, and payment date, with a link to download the full payslip.
AC-02	The dashboard shows the latest notifications (e.g. new payslip available).
AC-03	not

EPIC-P4-01 — Transaction History

Bundles: HR Bundle

Super Admins and employees can view a complete history of payroll transactions. Super Admins can export records.

US-P4-01-01 — Super Admin Transaction History

As a	Super Admin
I want	Have a detailed and filterable overview of all company transactions
So that	I can review the details of each spend, reconcile accounts, and make informed financial decisions
AC	Acceptance Criteria
AC-01	The transaction history view displays all payroll transactions for the company for all months, ordered by date (most recent first).
AC-02	Each transaction record shows: date and time, transaction type (payroll disbursement, wallet top-up, etc.), amount, source wallet, recipient or reference, and status (Successful, Pending, Failed).
AC-03	The Super Admin can filter transactions by: date range, transaction type, and status.
AC-04	The Super Admin can search for transactions by employee name, employee ID, or transaction reference.
AC-05	The Super Admin can export the filtered or full transaction list as a CSV or PDF.
AC-06	Transactions are displayed with clear pagination or infinite scroll. The total count and aggregate amount for the current filtered view are shown.
